American Long Standing

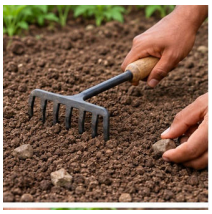

Coriander for leaves planting guide

Direct sow

Choose cooler weather for leaves; heat encourages flowering and seed production. Full sun in a cool growing period.

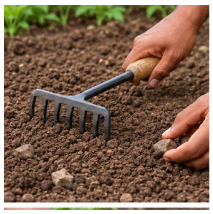

SEED DEPTH	FINAL PLANT SPACE	ROWS / DENSITY
0.6-1.3 cm	**About 5 cm for a leaf crop**	**About 40 cm**

1. Prepare loose soil

Choose a well-drained bed and loosen the surface for an even seed drill.

2. Sow where it will grow

Sow directly, 0.6-1.3 cm deep. Cover gently and keep moist during establishment.

3. Thin for leaf growth

Leave about 5 cm between plants for leaves, with rows about 40 cm apart.

4. Keep a fresh supply

Avoid waterlogging. Sow small batches in succession and pick leaves before the plants flower.

Harvest: Snip usable leaves while plants are leafy. For coriander seed instead, allow roughly 20-25 cm between plants and let them flower.

Growing note: The variety name does not remove the effect of heat on flowering. Select sowing dates for your local conditions.

Use local conditions and the current seed-lot label. Method illustrations show the practice, not exact cultivar appearance.
