Capricorn

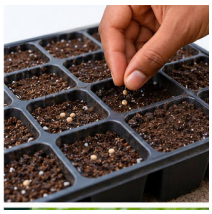

Sweet pepper planting guide

Raise seedlings, then transplant

Plant out after frost risk has passed and soil has warmed to at least 18 C. Full sun; shelter from damaging wind.

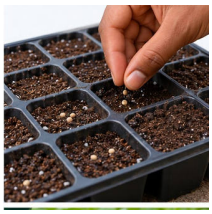

SEED DEPTH	FINAL PLANT SPACE	ROWS / DENSITY
5-10 mm	40-60 cm	90-100 cm

1. Sow in clean trays

Sow 5-10 mm deep in seedling mix. Keep warm and lightly moist.

2. Grow strong seedlings

Provide bright light after emergence. Avoid soggy trays and gradually acclimatise plants before planting out.

3. Transplant in warmth

Plant into a well-drained bed, 40-60 cm apart in rows 90-100 cm apart. Water the root ball in. Transplant at the former soil level.

4. Support and water

Add small stakes or support lines. Keep moisture even and retain leaves that shade developing fruit.

Harvest: Cut usable fruit with clean secateurs; do not pull.

Growing note: Ripe colour depends on the variety and selection.

Use local conditions and the current seed-lot label. Method illustrations show the practice, not exact cultivar appearance.
