Crimson Sweet

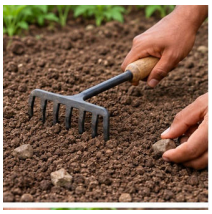

Watermelon planting guide

Direct sow or use young transplants

Choose a long, warm, frost-free growing season. Full sun.

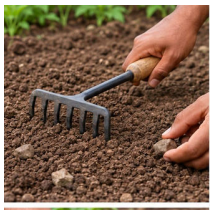

SEED DEPTH	FINAL PLANT SPACE	ROWS / DENSITY
2 cm	100-120 cm	150-210 cm, allowing for vines

1. Leave room for vines

Choose a sunny, well-drained bed with generous space for spreading growth.

2. Sow into warm soil

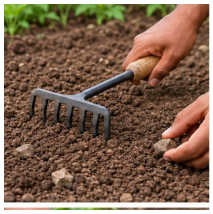

Sow 2 cm deep and thin to the final spacing. If using transplants, keep the root ball intact.

3. Water steadily

Maintain even moisture while young plants establish and fruit swells. Avoid saturated soil.

4. Protect flowers and fruit

Leave flowers accessible to bees. Keep developing fruit off wet ground.

Harvest: Let fruit ripen on the vine. Check several signs together, including a creamy-yellow ground spot and a drying tendril near the fruit.

Growing note: Wider spacing can suit vigorous vines and access needs. These are spreading crops, so allow enough ground space.

Use local conditions and the current seed-lot label. Method illustrations show the practice, not exact cultivar appearance.
