Kalahari F1

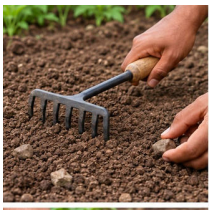

Butternut planting guide

Direct sow

Warm season after frost risk. Allow enough warm weather for fruit to mature. Full sun.

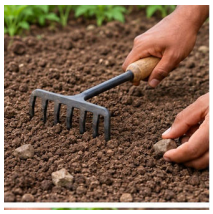

SEED DEPTH	FINAL PLANT SPACE	ROWS / DENSITY
2-3 cm	**60-85 cm as a starting guide**	**1.5-1.8 m**

1. Choose a sunny bed

Prepare well-drained soil with room for trailing vines and access between rows.

2. Sow in positions

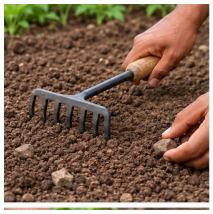

Sow 2 seeds per position, 2-3 cm deep. Thin to one strong plant once established.

3. Maintain steady moisture

Water at the roots as vines grow and fruit develops. Avoid waterlogging and repeated drying out.

4. Make room for fruit

Guide vines into the space provided and keep flowers accessible to pollinating insects.

Harvest: Harvest fully coloured, hard-skinned fruit before frost. Cut with a short stem rather than pulling it from the vine.

Growing note: Spacing affects fruit size. These are crop-level starting distances; use a variety-specific recommendation when supplied.

Use local conditions and the current seed-lot label. Method illustrations show the practice, not exact cultivar appearance.
